I. Question 1.2.4

$$1 \times 2 \times 3 + 2 \times 3 \times 4 + 3 \times 4 \times 5 + \dots$$

II. SOLUTION

$$X(z) = \sum_{n=-\infty}^{\infty} x(n) z^{-n}$$
 (1)

$$= \sum_{n=-\infty}^{\infty} \left(n^3 + 3n^2 + 2n \right) u(n) z^{-n}$$
 (2)

Using results of z-transform:

$$\therefore X(z) = \frac{6z^{-1}}{(1 - z^{-1})^4}, |z| > 1$$
 (3)

We know:

$$y_1(n) = x_1(n) * u(n)$$
 (4)

$$Y_1(z) = X_1(z) U(z)$$
 (5)

$$=\frac{6z^{-1}}{\left(1-z^{-1}\right)^{5}}, |z|>1\tag{6}$$

Now we take the inverse z-tranform of this equation.

On solving we get:

$$y(n) = \frac{n(n+1)(n+2)(n+3)}{4}$$
 (7)

Hence the sum of n terms of the above series is

$$y(n) = \frac{n(n+1)(n+2)(n+3)}{4}$$
